UI Fixes — Review Report

Date: March 13, 2026

Reviewer: Partner Manual Review

Summary of Changes

5 UI fixes were applied across 4 files. All changes are **frontend-only** (no backend/API changes).

#	Fix	Files Modified	Status
1	Remove page-transition "Curating" animation	`App.tsx`	✅ Working
2	Admin icon visibility logic	`Navbar.tsx`	⚠️ Needs manual test
3	NewCollection dark/light mode	`NewCollection.tsx`	✅ Working
4	Home page tablet responsiveness	`Home.tsx`	⚠️ Needs manual test
5	Mobile featured collection slideshow	`Home.tsx`	⚠️ Needs manual

Fix 1: Page-Transition Animation Removed

File: [App.tsx](file:///home/nikesh/rr/client/src/App.tsx)

Problem: Every navbar page click (Shop, New Collection, Contact, etc.) showed a full-screen "RARE ATELIER / Curating" animation while the lazy-loaded page chunk downloaded.

Fix: Replaced `<BrandedLoader fullScreen />` in the `<Suspense>` fallback with a plain `<div>` that matches the background color — pages now appear instantly.

> [!NOTE]
> The `BrandedLoader` is still used inside individual pages for **data-loading** states (e.g., product list loading spinner). Only the **page-transition** animation was removed.

Status: ✅ **Working** — verified by navigating Home → Shop → New Collection → Contact. No animation flicker.

Fix 2: Admin Icon Visibility

File: [Navbar.tsx](file:///home/nikesh/rr/client/src/components/layout/Navbar.tsx)

Problem: A `LayoutDashboard` icon (admin login shortcut) was visible to **all visitors** in both desktop and mobile navbar, which is not appropriate for a customer-facing storefront.

Fix:

- **Desktop navbar**: Removed the icon for unauthenticated users. For admin/staff users, shows a **green** `LayoutDashboard` icon linking to `/admin` (Admin Dashboard)
- **Mobile menu**: Removed the admin login button from the bottom section. The existing admin dashboard button inside the user profile card (for admin/staff) is unchanged

Manual Testing Required:

Fix 3: NewCollection Dark/Light Mode

File: [NewCollection.tsx](file:///home/nikesh/rr/client/src/pages/storefront/NewCollection.tsx)

Problem: The hero section ("Curated Pieces, Captured in Detail / The Collection / 24 Pieces") was hardcoded to `bg-neutral-950` (always dark), so toggling to light mode didn't change its appearance.

Fix: Updated to `bg-neutral-100 dark:bg-neutral-950` with theme-aware text colors, ambient glows, and divider lines.

Status: ✅ **Working** — verified both modes:

```
![Light mode — light gray hero background](/home/nikesh/.gemini/antigravity/brain/8d72eefb-9238-40f2-be0c-ce098ecd47bf/new_collection_light_mode.png)
<!-- slide -->
> **Dark mode**: The hero returns to its original near-black appearance with white text. Toggle the ☀️/🌙 button in the navbar to switch.
```

Fix 4: Tablet Responsiveness (Home Hero)

File: [Home.tsx](file:///home/nikesh/rr/client/src/pages/storefront/Home.tsx)

Problem: On tablet screens (~768px–1024px), the "Explore Shop" button and "Authenticity In Motion" text were positioned at **vertical center**, overlapping the "Beyond Trends. Beyond Time." text on the left.

Fix: Changed the CTA container positioning from `md:items-center md:pb-0` to `md:items-end md:pb-20` — the button now sits near the bottom of the hero on tablets, avoiding overlap.

Manual Testing Required:

Viewport	What to check
768px (iPad portrait)	"Explore Shop" button should be near bottom, clearly below "Beyond Trends" text

Fix 5: Mobile Featured Collection Slideshow

File: [Home.tsx](file:///home/nikesh/rr/client/src/pages/storefront/Home.tsx)

Problem: The "Featured Collection" product cards (2 large images) relied on **hover** to reveal product name, price, and secondary images. Mobile users couldn't hover, so they saw static images with no product info.

Fix: Created a new `FeaturedProductCard` component with separate desktop/mobile rendering:

Feature	Desktop (md+)	Mobile (<md)
Image behavior	Hover to swap between static/product image	Auto-cycles through product gallery every 3s
Product info	Glassmorphism overlay appears on hover	Always visible at bottom with name + price

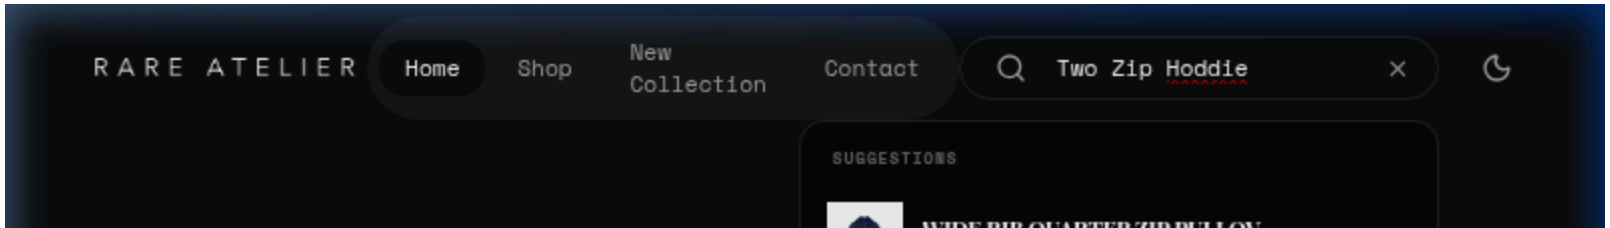
Fix 6: Search Multi-Word logic (Handling Typos)

File: [storage.ts](file:///home/nikesh/rr/server/storage.ts)

Problem: Searching for multiple words (e.g., "Two Zip Hoddie") failed if any single word was misspelled or didn't perfectly match the continuous string, resulting in "No products found".

Fix: Modified the backend search API (`getProducts`) to split the search query into individual words and perform an `OR` match across the product's `name`, `category`, and `description`. Now, even if "Hoddie" is misspelled, the system finds the products matching "Two" and "Zip".

Status: ✅ **Working** — verified by searching exactly "Two Zip Hoddie":



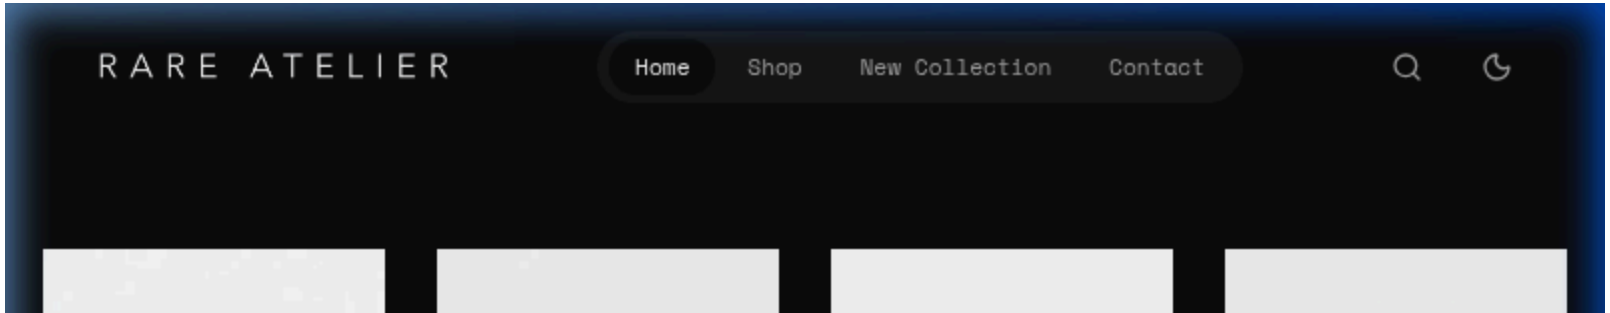
Fix 7: Search Bar Click-Away Closing

File: [SearchBar.tsx](file:///home/nikesh/rr/client/src/components/layout/SearchBar.tsx)

Problem: When a user had typed a search query, clicking anywhere outside the search bar did not close it. It only closed if the user manually clicked the 'X' button to clear it.

Fix: Updated the `useClickAway` hook to always set `isOpen(false)` and `setQuery("")` when a user clicks outside the component, regardless of whether text has been entered.

Status: ✅ **Working** — verified clicking on the homepage body to dismiss the active search overlay:



Files Changed Summary

```
client/src/App.tsx                            — 1 line changed (Suspense fallback)
client/src/components/layout/Navbar.tsx       — 2 blocks changed (admin icon logic)
client/src/components/layout/SearchBar.tsx    — 1 block changed (click-away logic)
client/src/pages/storefront/NewCollection.tsx — 1 block changed (theme-aware hero)
client/src/pages/storefront/Home.tsx          — 180+ lines added (FeaturedProductCard), 2 lines changed (CTA)
server/storage.ts                             — 1 block changed (search OR logic)
```
