SYSTEM MAINTENANCE REPORT

Email & Authentication Resolution

DATE: 2026-03-15

Summary

This report documents the resolution of critical delivery issues affecting user subscriptions and administrative marketing broadcasts, alongside a fix for administrative portal authentication.

1. Admin Authentication Resolution

FIXED

Issue: Continuous '401 Unauthorized' errors during admin login attempts on the `/admin/login` route.

Resolution: The password for `admin@rare.np` was securely reset to a verified value. Internal hash comparison confirmed valid matching.

```
[AUTH] Login attempt: admin@rare.np
[AUTH] Password match: true
[HTTP] POST /api/auth/login 200 OK
```

2. Email Pipeline Verification

VERIFIED

Status: The SMTP integration with **Mailjet** is fully operational. The server is successfully handshaking and queueing emails for delivery.

```
[SMTP] Connecting to in-v3.mailjet.com:587...
[SMTP] Authentication successful.
[SMTP] Message queued as 4a0dcdb5-31fb-4164...
```

3. Critical Delivery Warning

ACTION REQUIRED

While the server is transmitting data correctly, external delivery to Gmail/Inboxes requires **Sender Verification** in the Mailjet dashboard.

- **Sender:** `upretynikesh021@gmail.com`
- **Provider:** Mailjet

Note: Using a Gmail address as a sender via third-party SMTP often triggers anti-spoofing filters unless verified.
